L12 ANSWER 1 OF 4 HCAPLUS COPYRIGHT 2005 ACS on STN

ACCESSION NUMBER: 2003:33500 HCAPLUS

DOCUMENT NUMBER: 138:301517

TITLE: Altered **expression** of the RON receptor
tyrosine kinase in primary
human colorectal adenocarcinomas:
generation of different splicing RON variants and
their oncogenic potential

AUTHOR(S): Zhou, Yong-Qing; He, Chao; Chen, Yi-Qing; Wang, Dong;
Wang, Ming-Hai

CORPORATE SOURCE: Division of Neurosurgery, The First Affiliated
Hospital, Zhejiang University School of Medicine,
Hangzhou, Peop. Rep. China

CODEN: ONCNES; ISSN: 0950-9232

PUBLISHER: Nature Publishing Group

DOCUMENT TYPE: Journal

LANGUAGE: English

AB The RON receptor **tyrosine kinase** is a member of the
MET **proto-oncogene** family that has been implicated in
regulating motile-invasive phenotypes in certain types of epithelial
cancers. The purpose of this study was to determine if RON **expression**
is altered in primary **human colorectal adenocarcinomas**
. Results from immunohistochem. staining showed that RON is highly
expressed in the majority of colorectal **adenocarcinomas**
(29/49 cases). Accumulated RON is also constitutively active with
autophosphorylation in **tyrosine** residues. Moreover, three
splicing variants of RON, namely RON Δ 165, RON Δ 160, and
RON Δ 155 were detected and **cloned** from two primary colon
cancer samples. These RON variants were generated by deletions in
different regions in extracellular domains of the RON β chain.
Functional studies showed that **expression** of RON Δ 160 or
RON Δ 155 in Martin-Darby canine kidney cells resulted in increased
cell dissociation (scatter-like activity). RON variants, RON Δ 160 and
RON Δ 155, also exerted the ability to induce multiple focus formation
and sustain anchorage-independent growth of transfected NIH3T3 cells.
Moreover, NIH3T3 cells **expressing** RON Δ 160 or RON Δ 155
formed tumors in athymic nude mice and colonized in the lungs. These data
suggest that RON **expression** is altered in certain primary colon
cancers. Abnormal accumulation of RON variants may play a role in the
progression of certain colorectal cancers in vivo.

AB The invention provides protein and cDNA and genomic sequences for a novel **human** protein, which shares sequence homol. to a known protein **kinase**, and is related to the **proto-oncogene tyrosine kinase** subfamily. The gene is **expressed** in placenta, lung tumors, kidney tumors, pregnant **uterus**, leukemia, stomach **adenocarcinoma**, and **hippocampus**. Ten novel single nucleotide polymorphism sites (beyond the ORF or in intron regions) were identified. Thus, the present invention specifically provides isolated peptide and nucleic acid mols., methods of identifying orthologs and paralogs of the protein **kinase** peptides, methods of identifying modulators of the protein **kinase** peptides, and methods of diagnosis and treatment of diseases associated with the protein **kinase**.

AB We previously reported a novel **human non-receptor tyrosine kinase** gene, HYL (hematopoietic consensus **tyrosine-lacking kinase**) (Sakano et al., 1994), which consists of each of the SH2 (src homology 2), SH3 and **tyrosine kinase** catalytic domains. HYL has unique structural features shared with CSK (C-terminal Src **kinase**). Recently it has also been reported that matk (Bennett et al., 1994) and Ctk (Klages et al., 1994) are isolated as novel **kinases** with structural similarity to CSK. Comparisons of cDNA sequence indicate the HYL, matk and Ctk are the same gene. We further characterized the mouse HYL genomic structure and HYL mRNA **expression** in mouse brain. The mouse HYL gene is distributed over 5.8 kb and is composed of 12 exons. The exon-intron organization is almost identical with that of **human CSK**. The mouse HYL gene was assigned to the R-positive C1 band of chromosome 10 by fluorescent in situ hybridization. RNA in situ hybridization demonstrated the broad distribution of HYL mRNA **expression** in various neuronal cells. Especially, strong signals were detected in Purkinje cells, pyramidal cells in the **hippocampus**, granule cells in the dentate gyrus, and mitral cells in the olfactory bulb, indicating that mRNA **expression** of HYL in brain is very similar to that of SRC-family **kinases**. These findings establish close relationship between the HYL and CSK genes and also suggest that HYL may play an important role in signal transduction through SRC-family **kinases** in the central nervous system.

DOCUMENT TYPE: Journal; Article

FILE SEGMENT: 025 Hematology

LANGUAGE: English

SUMMARY LANGUAGE: English

AB Homozygous mutant rats at the newly found white spotting (Ws) locus were anemic and deficient in mast cells and melanocytes. Because the phenotype of Ws/Ws rats resembled the phenotype of mice possessing a double-gene dose of mutant alleles at the W locus and because the c-kit gene was mapped at the W locus of mice, we characterized the c-kit gene of Ws/Ws rats. The authentic sequence of the rat c-kit cDNA was determined by using a cDNA library prepared from the **hippocampus** of Sprague-Dawley rats. The c-kit cDNA of Ws/Ws and normal (+/+) control rats was obtained by reverse transcriptase modification of the polymerase chain reaction. When compared with the authentic sequence, a deletion of 12 bases was found in the c-kit cDNA of Ws/Ws rats. This change was shown to be a result of the deletion of the genomic DNA. Four amino acids encoded by the deleted 12 bases (ie, Val-Lys-Gly-Asn) were located at two amino acids downstream from the **tyrosine** autophosphorylation site in the c-kit **kinase** and were conserved not only in mouse and **human c-kit kinases** but also in mouse and **human c-fms kinases** (ie, receptors of colony-stimulating factor-1).

Taken together, the Ws/Ws rat is the first characterized mutant of the c-kit gene in an animal species other than the mouse.

L22 ANSWER 33 OF 70 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN
ACCESSION NUMBER: 2003-06598 BIOTECHDS

TITLE: New **human kinase** protein, useful for
treating or diagnosing disorders associated with an absence
of, inappropriate, or unwanted **expression** of the
protein, e.g. inflammation or cancer, in drug screening
assays and pharmacogenomics;

recombinant enzyme protein production via
plasmid **expression** in host cell use in disease
gene therapy

AUTHOR: **GAN W**; YE J; DI FRANCESCO V; **BEASLEY E M**

L22 ANSWER 60 OF 70 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2002-07016 BIOTECHDS

TITLE: Nucleic acids encoding a proto-oncogene tyrosine
kinase, useful for the prevention, diagnosis and
treatment of e.g. leukemia and lung tumors;
tyrosine-**kinase** gene transfer by vector
expression in host cell for cancer gene therapy

AUTHOR: **GAN W**; YE J; DI FRANCESCO V; **BEASLEY E M**
PATENT ASSIGNEE: PE CORP NY
PATENT INFO: US 6340584 22 Jan 2002
APPLICATION INFO: US 2001-817180 27 Mar 2001
PRIORITY INFO: US 2001-817180 27 Mar 2001

L22 ANSWER 61 OF 70 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2002-11649 BIOTECHDS

TITLE: New nucleic acid encoding a **human kinase**
protein useful for, e.g., monitoring the effectiveness of
modulating compounds on the **expression** or activity
of the **kinase** gene;

recombinant protein production, antisense DNA,
ribozyme and modulator drug screening, useful for gene
therapy, diagnosis and **expression** profiling

AUTHOR: YAN C; KETCHUM K A; DI FRANCESCO V; **BEASLEY E M**

PATENT ASSIGNEE: PE CORP NY

PATENT INFO: US 6340583 22 Jan 2002

APPLICATION INFO: US 2001-813817 22 Mar 2001

PRIORITY INFO: US 2001-813817 22 Mar 2001

L22 ANSWER 62 OF 70 HCAPLUS COPYRIGHT 2005 ACS on STN

ACCESSION NUMBER: 2002:941845 HCAPLUS

DOCUMENT NUMBER: 138:21334

TITLE: Protein, gene and cDNA sequences of a novel
human protein **kinase** related to
serine/threonine **kinase** and their uses in
drug screening

INVENTOR(S): Yan, Chunhua; Li, Zhenya; Neelam, Beena;
Difrancesco, Valentina; Beasley, Ellen M.

L22 ANSWER 64 OF 70 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2002-06172 BIOTECHDS

TITLE: New isolated **human kinase** proteins and
nucleic acids, useful as a major target for drug action and
development, particularly for screening modulators of the
kinase peptides;

recombinant protein gene production via plasmid
expression in host cell useful in gene therapy and
drug screening

AUTHOR: GUEGLER K; DI FRANCESCO V; **BEASLEY E M**

PATENT ASSIGNEE: APPLERA CORP

PATENT INFO: WO 2001092496 6 Dec 2001
